

Dec. 1979-Feb. 1980

BACKGROUND OFFERED ON ETHIOPIA'S ANTI-MALARIA CAMPAIGN ISSUES

Thanks are extended to John Moohr, Chicago, for providing a copy of the Imperial Ethiopian Government's brochure published in conjunction with the April 7, 1962, anti-malaria issues (Scott #s 383-5).

The full text is reproduced below. It offers a mini-primer on the disease, a mini-history on eradication efforts, and the Ministry of Posts, Telegraphs and Telephones announcement.

The scourge of malaria has plagued man since the beginning of time. It is estimated that prior to World War II over 100 million cases and approximately three million deaths annually resulted from this dreaded disease, making it the number one public health problem on earth.

Malaria, a blood disease, is transmitted through the bite of the Anopheline mosquito. An infected mosquito literally injects the parasite into the blood stream of man. The parasite evolves through several stages and destroys blood cells, either causing death or incapacitation to the victim. Individuals recovering from an attack of malaria and bitten by a non-infected mosquito, in turn are capable of infecting the Anopheline, thus completing the chain of malaria transmission, mosquito-man-mosquito.

Realizing the importance of the malaria problem, the Pan American Sanitary Bureau began investigations in 1951 to consider the feasibility of eradicating the disease from the Western Hemisphere. The results obtained from these studies were so favourable that in 1955 the World Health Assembly (United Nations) adopted a resolution recommending that malaria eradication activities be instituted throughout the world.

Such a program has come to reality. It encompasses the entire globe and is the first and most dramatic world-wide public health campaign in history. Primary consideration is given to the need for breaking the chain of malaria transmission through control of adult Anopheline mosquitoes. This is being accomplished by applying DDT and other residual type insecticides inside human dwellings one to three times per year for three to four consecutive years followed by a consolidation period lasting another three to four years.

The first pilot project in Ethiopia began in 1955 and was a joint Ethiopia-United States operation. This was followed by a WHO-assisted pilot project in 1957. Both projects concluded that malaria eradication was technically feasible in the Empire. As a result of this conclusion, the Government accepted the principle of malaria eradication and decreed an Imperial Order November 22 of 1959 in the Negarit Gazetta providing for the establishment of a national Malaria Eradication Service within the Ministry of Public Health with all the necessary elements for the initiation of the campaign and the achievement of the final objective by stages.

CORRESPONDENCE

O
R
N
E
R

Send all correspondence to the editor, J. W. Dellinger, 114 Arlington, Elmhurst, IL 60126. Let us know what you think about this publication; ask general questions about the malaria topic; sound off about good -- or bad -- experience with topical dealers, building your collection, doing research; etc.

WHAT PRICE SUBSCRIPTION ?

I was delighted to receive the first copy of *Miasma Philatelist*. However, I did not find a price on a subscription to this publication.

We have always thought we had a pretty complete collection of mint malaria. Now I find I must do a lot of checking with your official 1962 Postal Administrations issuing stamps list.

We have our malaria issues in Lindner hingless malaria album. I can tell without checking it has spaces for stamps or souvenir sheets which are not official.

So glad to see a publication of this type. I do not want to miss a single issue.

V. Clark, Norman, OK

Editor's Note: As announced in our initial issue, this publication is intended to provide the source for eventual publication of a definitive handbook on the malaria topic. Thus, it ... "is distributed free to all known collectors with interest in any aspect of the malaria topic." Number 10 SASEs to help share the postage costs are always appreciated.

IMPRESSED. . .

I received the first issue of *Miasma Philatelist* and was very impressed with the journal. I hope that it has continued success. . . enclosed is a SASE.

T. Gargan, Columbia, MD

LET'S SEE NAMES

Miasma Philatelist Vol 1, No 1 is excellent and informative as can be. I myself am only a beginner in this field of collecting but pledge to help you in every way possible. My greatest interest in securing writeup material such as one finds in governmental brochures. . . I believe your "free" ads will intice many members to your group and suggest one step further, this being to use member names as often as space permits as most people enjoy seeing their name in print, this will encourage even shy ones to submit interesting tid bits on malaria as well as personal findings and research. . . .

The "In search of . . ." is not only helpful to needs of certain members but informs others of items they knew nothing about. I dread the thought of making up a list of my needs as so much seems to have been available unknown to me.

In my opinion I find traveled covers or covers showing actual commercial mail use very exciting, usually inexpensive and behind each lies a story. . .

J. Moohr, Chicago, IL

Editor's Note: Thanks for the support. Whenever and wherever possible credit for any material appearing in this publication will be given to the collector responsible.

(continued on page 5)

BACKGROUND ON ETHIOPIA'S ANTI-MALARIA ISSUES (continued from page 1)

The Malaria Eradication Service has now engaged about 250 employees, with material and equipment, in various parts of the country combatting the disease and protecting about 7% of the estimated ten million population living in malarious areas of the Empire.

REALIZING the significance of active cooperation in malaria eradication as the greatest international health endeavour ever undertaken in the world,

RECOGNIZING the value of the intensive world-wide informative and educational activities in such an undertaking,

KNOWING that malaria in Ethiopia constitutes a serious public health problem of the first order,

NOTING the efforts being undertaken by the Imperial Ethiopian Government, Ministry of Public Health to eradicate the disease,

HAVING carefully reviewed the WHO Executive Board resolutions and related correspondence on the issuing of special postage stamps commemorating the world-wide campaign for the eradication of malaria, The Imperial Ethiopian Government, Ministry of Posts, Telegraphs and Telephones joins in cooperating in the world-wide campaign against malaria by issuing special postage stamps. From the total of this issue 20% will be donated to the WHO to benefit its funds.

Design of the stamps depicts the interest and effort of all nations in their common fight against the Anopheline mosquito, thus ridding the world of one of man's oldest and most debilitating scourges -- malaria.

Issue date of the stamps commemorates World Health Day, April 7. The series is printed in three denominations, each of different colour.

COVER / CANCEL INFORMATION REQUESTED

Background information on the European Conference of Malaria Eradication held March 31, 50, in Palermo, Italy; the illustrated cover; and its cancellation is requested from any and all readers. Official, or unofficial, data on number produced; varieties -- if any; length of time the cancel was used; etc. would be appreciated. How many collectors have this cover, or other material related to this conference, in their collection??
Cover from the collection of R. Ward, D.C.

MALARIA TOPICAL CHECKLIST (continued from last issue)

The last digit of each item's identification number indicates its catalog source:

1 = Scott 2 = Michel 3 = Minkus 4 = Gibbons 5 = Yvert 6 = Zumstein 9 = NONE

Colors for cachets are listed from top left to center of the cachet design area. Subtopic codes are given for both stamp/sheet and cachet. Two sets, separated by a dash, appear for special cancellations on cachet covers in that respective order. Subtopic codes used are:

1 = WHO '62 campaign emblem	9 = hospital	N = NONE
2 = WHO emblem	A = microscope	O = other drug / medicine
3 = mosquito	B = swamp / marsh	P = personality (specific)
4 = spray / DDT / oil	C = Caduceus	Q = quinine
5 = Doctor(s)	D = child(ren)	S = slogan
6 = Nurse(s)	E = Aesculapius	

Submit suggestions for additions with reference to use by catalog and number.

CORRESPONDENCE CORNER (continued from page 2)

EXHIBIT AWARD WINNER

I was very interested to read about *Miasma Philatelist* in Linn's. You might be interested to know that my topical exhibit on MALARIA just won a silver (and ATA second) at VAPEX. While this subject is one of my recent interests, I will be more than glad to share my information with you and other malariologists.

R. Chakravorty, Salem, VA

WAS NORTH VIETNAM "OFFICIAL" ?

Your comments of the official vs unofficial malaria issues makes me wonder where the three value set of North Vietnam fits in. I believe that the set was issued in 1962 but at that time I do not believe that North Vietnam was a member of the UPU nor is there any indication that the stamps were issued for the "World United Against Malaria" issue. Certainly the country did have a malaria program as the former Indo-China was and is now a real hotbed of malaria as witness the plight of the Cambodian refugees crossing into Thailand right now.

A. Steffen, Washington, DC

... additions to your list:

North Vietnam - Michel Catalog #220-222, issued July 9, 1962 for Anti-Malaria campaign. Net value: U.S. \$4.50 (Quantity issued 250,000 sets).

Mongolia - first day of issue was July 10, 1962 (see Michel #301-8).

S. Carol, Holbrook, NY

Editor's Note: The "official" WHO list published in Vol. 1, No. 1 was not created by the editor. As reported, it was extracted from the World Health Organization Director-General's report made May 11, 1963, listing the 144 official participating postal administrations and dates of issue. As North Vietnam was not listed in the WHO report, it can be assumed it was not "official". The issue dates listed by the WHO's Director-General were noted as questionable based on those appearing in current standard reference catalogs -- but they are the dates as published by WHO.

LIBRARY SUBSCRIBES

... The Special Collections department of this Library has extensive material on malaria and yellow fever, including a fairly representative collection of the 1962 WHO malaria campaign issues (at least, according to Newerla's listing).

Since we are of course very interested in the literature relating to medical philately, we would very much like to receive your bulletin *Miasma Philatelist*, and would hope to be able to maintain a complete permanent file of it in our Historical Collections. . .

W. Bird, Duke University
Medical Center Library

Editor's Note: Thanks for the honor. Every effort will be made to make the publication worth keeping in such prestigious company.

(continued on page 6)

PPOLOGIES OFFERED

Issue one of *Miasma Philatelist* contained a major error noted by S. Carol. Throughout, Yemen was Yeman. Subscribers receiving handwritten correspondence from the editor may understand how a non-philatic typist made the translation. Colombia became Columbia in subscriber #4's exchange list -- same problem, different source.

CORRESPONDENCE CORNER (continued from page 5)

SIR WM. OSLER, M.D. MISSED

. . .you may already have this information, but this stamp was not listed in your bulletin:

Canada - 1969 - Scott #495 - Sir William T. Osler. (1849-1919) After he confirmed Laveran's discovery, this Canadian physician insisted that no one in his clinic would make a diagnosis of malaria unless it was based on an examination of blood smears. (His clinic was in the U.S.) It was largely due to his subsequent writing and teaching of this and other principles of malaria diagnosis and treatment that the confusing hybrid disease, typho-malaria, was driven out of text books and medical meetings.

Best regards to your and may your journal be a great success. . .

E. Shoup, Akron OH

Editor's Note: This publication's success depends upon reader participating, such as this much appreciated addition to information on malaria-related personalities on stamps. All such biographical notes, resulting from collector research, will be printed if submitted. (see the new POSTAGE PERSONALITY column).

RUMOR OR FACT

QUESTIONS ON THE MALARIA TOPIC IN NEED OF ANSWERS

1. Although Mexico appears on most existing checklists as issuing the first stamp (RA14 issued in 1939) related to malaria, can not Surinam's B4-7 issued in 1928 have the honor? - JD
- A. The reason for issue of Surinam B4-7 relates to "indigenous diseases" which is a far too broad-range purpose to qualify for specific relationship to malaria. A more appropriate choice would be Canal Zone 105 portraying General William C. Gorgas (issued October 3, 1928). General Gorgas' role in military medical history is well known, especially his control of malaria and yellow fever in Cuba (1898) and Panama (early 1900s). - R. Ward, D.C. Or, Columbia 335 (see checklist) - JD
2. Bhutan has been stated as having produced an appropriate overprint during the 1962 WHO Anti-Malaria campaign. Has such a stamp been seen or added to anyone's collection? - A. Steffen, D.C.
- A.  The illustrated 33ch anti-malaria essay was printed for Bhutan by Harrison and Sons in London, but was not issued due to the illustration of Buddha. According to G. Alveizos, noted California dealer, only one sheet of 100 is known to exist and a copy of this rare essay was sold at his public auction in 1977. Mr. Alveizos states he has also "seen a picture of another demonimation of the same design, but know nothing further than this." No information on any related anti-malaria overprint (as done in Mauritania) has been found. Thanks to C. Clemmer, Chicago, for the tip that put us in contact with Mr. Alveizos. - JD
3. Do you have any information on what part, if any, that the following named man played in any field of malaria? Scott #250 (1954) Algeria, E. Millon. - E. Shoup, Akron
- A. Auguste Nicolas Eugene Millon (1812-1867) was an Army Surgeon who in 1850 assumed the post of Chief Pharmacist for the army in Algeria. Millon is best known as a chemist. Combining both interests while in Algeria, Millon did studies on the treatment of malaria. - JD

4. What Malaria Topical albums are available? - J. Palmieri, APO San Francisco

A. Three albums have been reported in use, to date. None are "available" as a dealer shelf item. They were published to support the 1962 WHO Anti-Malaria campaign: Ayal Publications; White A&C, Washington Press; and Lindner (hingeless). Information on availability of these or other malaria albums will be reported as received.
- JD

Answers, comments, and further questions should be sent to the editor, J. W. Dellinger, 114 Arlington, Elmhurst, IL 60126. General correspondence to the editor and general questions/comments will appear in "Correspondence Corner". Specific questions and answers will be presented in "RUMOR OR FACT".

PERSONALITIES ON

O Carl von Linne (Carolus Linnaeus), 18th century botanist was the first to formal-
S ly classify Cinchona Bogotensis as a byproduct of his development of the binominal
T method for naming/classifying specimens. His system was published in 1735 -
A "Natural System". As the holder of a medical degree from the University of Harder-
G wijck in Holland, von Linne also held beliefs that malaria was a water-born para-
E sitic disease. Postally has been honored by six nations for his work as a
botanist/natural scientist: Bulgaria 994; German Democratic Republic 389; Norway
356; Romania 1217; Russia 1955; and Sweden 294, 296, 298.

He is qualified as a malaria personality related to two sub-topics: theory of cause and treatment (specifically quinine).

Julius Wagner-Jauregg (1875-1940) a neurologist and psychiatrist, won the Nobel Prize for Medicine in 1927 for his treatment of general paralysis of the insane with fever by the injection of malaria parasites into the patient and subsequent curing of the malaria by quinine. Austria honored him philatelically in 1957 (Scott 615).

Credit for the material on Dr. Wagner-Jauregg goes to R. Bindie, MD, who forwarded a copy of a staff newsletter from his hospital, in which it appeared.

CHECKLIST UPDATES / NOTES OFFERED

1962 Cambodia did not issue souvenir sheets of 106-8. The listing should be for mini-sheetlets of 4 similar to those issued by Hungary for 1461. They were issued perforate with gum and imperforate without gum. - C. Clemmer, Chicago

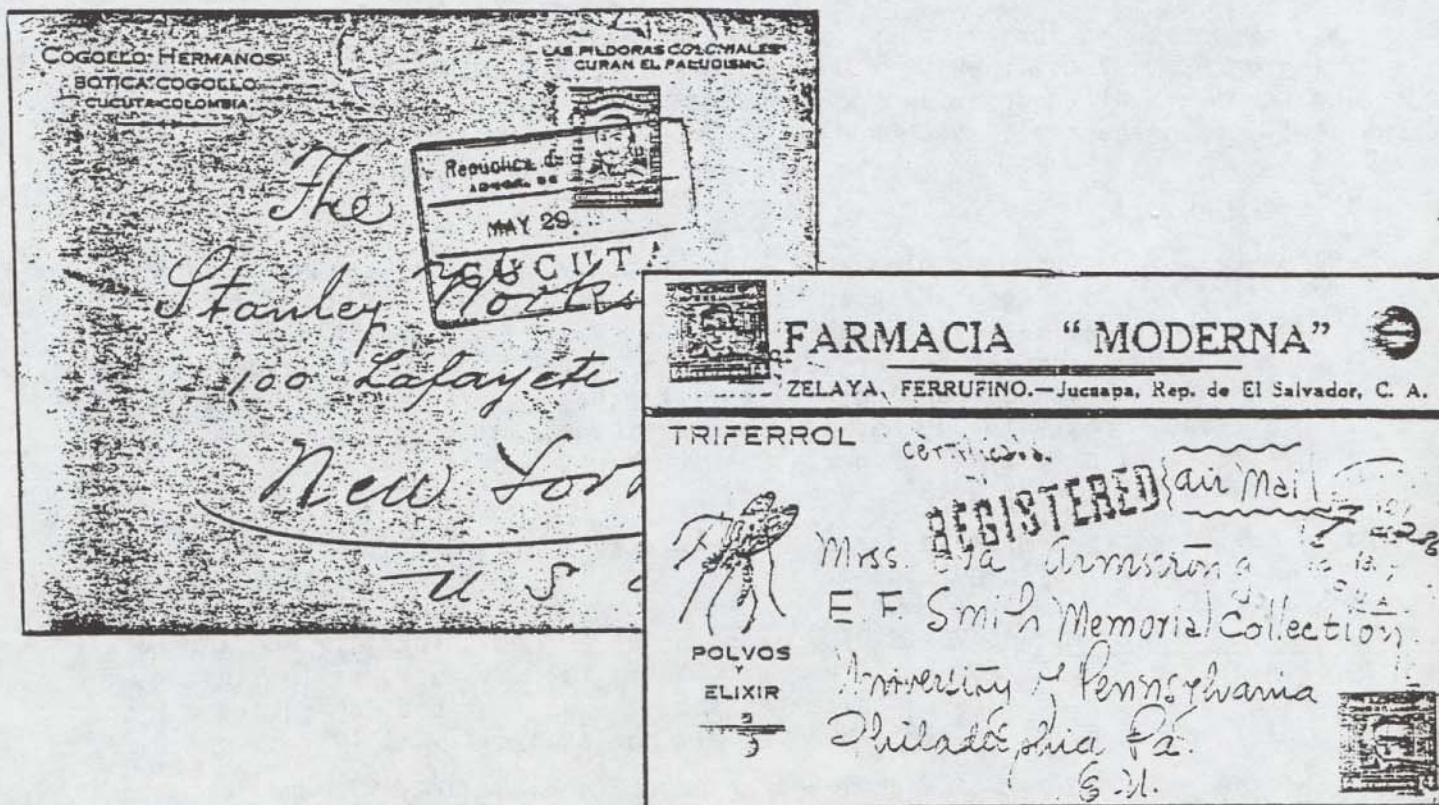

All imperforate issues for current or former French Community of Nations (Algeria and Cambodia listed in the last issue) are normally issued at least 12 months after the original issue date. Thus, first day covers - when produced and available - do not carry the catalog listed issue date but the release date for the imperforate version. - C. Clemmer, Chicago

Checklist identification numbers used have no meaning except for the last digit, as noted, which indicates the catalog source for the identification number used in the description. Checklist ID numbers are assigned to facilitate automatic sorting to prepare the master checklist and supplemental (sub-topic) check lists. - JD

Master checklist from A-Z, including private and commercial philatelic material related to malaria, will be published as a supplement to every eighth issue of this publication. These biannual releases will include all corrections and additions reported by subscribers based on the sections of the master list published in each issue.

COLLECTOR OFFERS CHALLENGE: FIND AN EARLIER MALARIA COVER

The following two commercial covers, from the collection of R. Ward, illustrate the wealth of philatelic material one can uncover. The Colombia cover cancellation is dated May 29, 1929. "Can anyone come up with a malaria-related cover earlier than this?" is his question to his fellow collectors.

IT DOES PAY TO ADVERTISE

From sales/exchange listings in Vol. 1, No. 1 transactions with over \$150 (\$2.75 over) in retail value were processed. Most purchasers/traders received two-thirds of what they requested. Mail was handled on a "first in, first out" basis based on receipt.

Most popular -- needed? -- item was collector #2's S. Kasai 5 value '62 Anti-Malaria overprint set.

Not 1¢ in transactions occurred from the initial want lists. Obviously, the S. Kasai set is wanted. If it is among a collector's duplicates, it can be sold.

DEALERS ASK FOR ADVERTISING SPACE: READER POLL REQUESTED

Due to excellent press coverage on the initial issue of *Miasma Philatelist*, several dealers have contacted the editor requesting advertising rates. Originally, collector only exchange, sale and want listings were scheduled to appear. Before making any change to allow for commercial advertising, the editor would like to hear from the readers. Based upon the majority opinion from reader cards and letters received by April 31, 1980, the next issue will/won't contain dealer advertisements.

XCHANGES / \$ALES AVAILABLE

Exchange and sale offers are listed in this column on a confidential basis at a minimum (cost recovery) charge of 10¢ per listed item.

TO LIST an item for sale or as available for exchange, complete the Exchange/Sale/Want List Request on the back page and mail with payment, the listed item(s) and a SASE. When listing items for exchange, please include corresponding want list items acceptable in trade -- either specific item(s) or "any X accepted". Sale items may be listed with firm prices or BO (best offer) above a listed minimum.

Exchange/sale items will be returned 30 days after the second publication date following receipt, if not traded or purchased after two listings.

TO TRADE/PURCHASE send listed want item(s) or check and SASE. Exchange items will be shipped upon receipt of trade. Sale items will be shipped when check clears. Best Offer items will be invoiced to the top bidder 30 days after listing; shipment following payment.
