DISEASE BEGINS TO BE CONQUERED BY MAN.
 The 20th century witnessed incredible medical advances that enabled people to live longer, healthier lives. In 1900, U.S. Army pathologist and bacteriologist, Major Walter Reed, headed a commission to investigate a yellow fever epidemic among American troops in Cuba. Their crucial experiments established that the bite of an infected mosquito transmitted the disease. Not only was Reed's work a major milestone in 20th-century medicine, but the elimination of yellow fever in Central America had far-reaching economic and military benefits as well—allowing workers to safely finish construction of the Panama Canal. Other notable diseases controlled by man in the 20th century include polio, measles, tuberculosis, typhus and cholera.
