

SIR RONALD ROSS

HISTORY OF MALARIA • ROSS

1857-1932

Working in India, Sir Ronald Ross proved that malaria was transmitted from mosquito to man and back to mosquito.

ANOPHELIA

Ross

Issue Date: April 25, 2009
Designer: M. Corsi
Producer: Juergen Schwarz, Berlin
Process: lithography
Quantity: 20
Perforations: 11
Margins: M. Corsi at bottom left; Rome - 2009 at bottom right
Purpose: recognize Ross's contribution to understanding malaria
Notes: from a 16-stamp collective sheet
Price: A

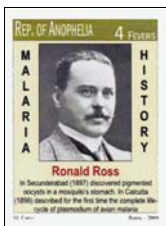

9d

ARTIFICIAL LENS IMPLANT SURGERY

Artificial lens implant surgery is a complex procedure that involves the replacement of the natural lens of the eye with a synthetic lens. This procedure is typically performed on patients who have cataracts or other eye conditions that affect their vision. The surgery is performed using a small incision in the cornea, and the natural lens is removed and replaced with a synthetic lens. This procedure has revolutionized the treatment of cataracts and other eye conditions, allowing patients to regain their vision and improve their quality of life.

MALARIA AND MOSQUITOES

Malaria is a life-threatening disease caused by a parasite called Plasmodium, which is transmitted to humans by a mosquito. The parasite enters the human body through the mosquito's bite and travels to the liver, where it multiplies. It then travels to the bloodstream and infects red blood cells, which it destroys, causing the symptoms of malaria. Malaria is a major public health problem in many parts of the world, particularly in tropical and subtropical regions. The disease is preventable and treatable, but it remains a significant cause of illness and death.

COMPUTED TOMOGRAPHY (CT) SCANNER

Computed tomography (CT) scanning is a medical imaging technique that uses X-rays to create cross-sectional images of the body. The patient lies on a table that moves through a large circular gantry. Inside the gantry, a rotating X-ray tube and a detector array collect data that is processed by a computer to produce a series of cross-sectional images. These images can be viewed in different planes and combined to create a 3D reconstruction of the scanned area. CT scanning is used to diagnose a wide range of conditions, including tumors, fractures, and internal organ diseases.

inside

SIR RONALD ROSS's work on the transmission of malaria, completed in 1897, provided the foundation for tropical medicine in the 20th century – and, as a result, Ross became the first British scientist to receive the Nobel Prize in Physiology or Medicine. For centuries, malaria was endemic in low-lying parts of Europe, but by the late 19th century it was widely seen as a characteristically tropical disease. Several researchers working in European colonies in Africa and Asia had identified a microscopic parasite – now known as *Plasmodium falciparum* – as the organism responsible for malaria. But its life cycle was notoriously complex, depending upon insect vectors and local environmental factors. Ross, a young doctor in the Indian Medical Service, spent several years dissecting the relationship between *Plasmodium* and the *Anopheles* mosquito. On 20 August 1897 – ‘Mosquito Day’ in Ross’s diary – he completed his study. Ross’s theory of malaria transmission was quickly adopted, and in 1902 he received only the second Nobel Prize given out in his field. Ross’s pioneering multidisciplinary approach provided a highly influential model for later research on tropical diseases, and it has stimulated a series of attempts to control and eradicate malaria in many parts of the world.

Description: presentation folder with stamp set and descriptive text

Designer: Howard Brown; text by Dr. Richard Barnett

Producer: Walsall Security Printers

Size: 216 x 115 mm

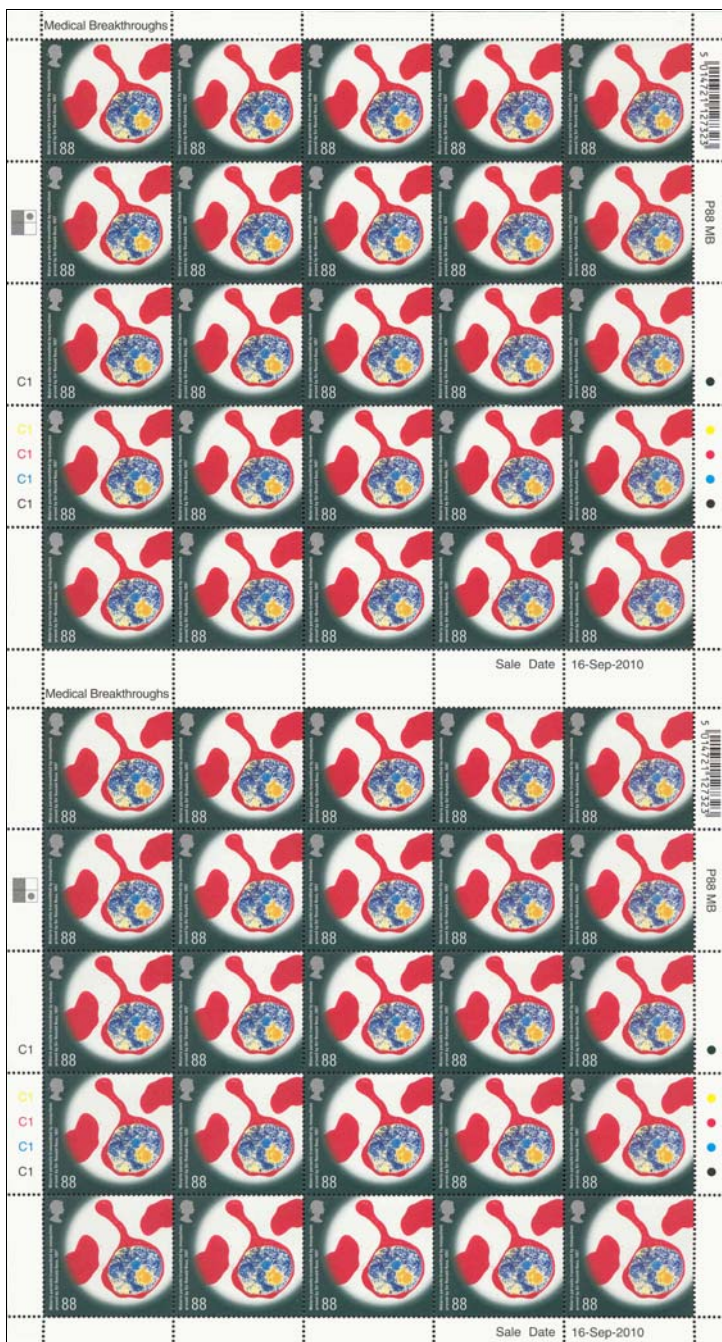

Notes: text about Ross and his work, which was “completed” in 1898 when he verified bird to mosquito to bird transmission of malaria parasites

SIR RONALD ROSS

HISTORY OF MALARIA • ROSS

Mosquito Day 1982  Sir Ronald Ross 1857-1932  1982 is an annual series of commemorative covers issued August 28 in honor of the 125th anniversary of the discovery of the malarial organism by Ronald Ross. The cover is issued in honor of the 125th anniversary of the birth of Sir Ronald Ross (1857-1932) marks the 125th anniversary of the birth of Sir Ronald Ross (1857-1932). Ross was educated in England and entered the Indian Medical Service in 1881. The suggestion that mosquitoes might be the carriers of malaria was made in conversations with Sir Patrick Manson. This led Ross to conduct malaria research, as a result, Ross found that the malarial parasite did cause malarial organisms in 1897. Ross became Professor of Tropical Medicine at the University of Liverpool in 1900, and in 1902, he was elected to the Royal Society. Ross died in 1932, and in 1982, the 125th anniversary of his birth was celebrated in India. The cover is issued in honor of the 125th anniversary of his birth. The cover is issued in honor of the 125th anniversary of his birth. The cover is issued in honor of the 125th anniversary of his birth.
