Two 12-card series of malaria information postcards were produced by the Federation of Agricultural-Antimalaria Committees of Benevento, Caserta, and Eboli located at the Portici Agricultural-Antimalaria Station of the Royal School of Agriculture. Lithographed by E. Della Torre of Portici, the cards measure 141 x 91 mm. On the front is a photo, descriptive text, and a serial number (series 2). On the back is producer and printer information and spaces for message and address.

*Text:* Malaria information postcard of the Federation of Agricultural-Antimalaria Committees of Benevento, Caserta, and Eboli located at the Portici Agricultural-Antimalaria Station of the Royal School of Agriculture and serial number at top; Lit. E. Della Torre - Portici at lower left

	<p><i>Image:</i> railroad workers' lodging house  <i>Text:</i> Railroad personnel were the first to benefit from mechanical antimalaria protection. This, combined with the prophylaxis and pre-epidemic treatment with quinine, has lowered malaria cases among the former Adriatic network from 69.92% to 10.71%.  <i>Notes:</i>  <i>Price:</i> E</p>

*Checklist:* \_\_

*Image:* tree-lined drainage ditch  
*Text:* Malaria does not always occur just because an area has stagnant water. For example, in the lower part of the province of Reggio Emilia, as in the rest of the Po Valley, stagnant waters certainly are not in short supply; but malaria is sparse because all land is not covered by water and it is intensively cultivated.

*Notes:*

**D2**

*Checklist:* \_\_

*Image:* river confluence  
*Text:* At the confluence where the Stella and Palistro Rivers come together to form the Alento (in Salerno Province), it seems to be a desert frontier! This is the condition of most of the rivers in the middle of Italy and, unfortunately, many of the North. This the result of deforestation of the mountains far away!

*Checklist:* \_\_

*Image:* agricultural station  
*Text:* Although reclamation work is expensive, but well understood, it is often unnecessary in southern Italy because landowners manage hydraulic restoration of their lands. This is how the flat lands in the Valley of the Crater were cleansed.

*Notes:*  
*Price:* E

**D6**

*Checklist:* \_\_

*Image:* log jam  
*Text:* Deforestation sends silt downstream and raises riverbeds that, very often, in times of flood, causes the water to enter tributaries rather than drain from them. This is seen with the waters of the Crati River flowing up the Turbolo and Cocchiato Rivers.

Colla cooperativa, in materia di bonifica agraria, si possono compiere miracoli. Certi consorzi di difesa, come quelli della sponda del fiume Secchia, hanno superate quelle di sponda in laici, dal genere dei rappresentanti della presente figura, più del valore delle terre difese. Posso citare di esempio agli abitanti del Mezzogiorno!

*Image:* dike

*Text:* With close cooperation in land reclamation, you can perform miracles. Some consortia, such as along the bank of the Secchia River, have contributed the cost and labor to create the kind of land defenses shown here. This could be an example for the inhabitants of the South!

La vergogna della macchia, che tanto sponeggia nel mezzogiorno d'Italia, deve cedere e aprire al fronte al progresso dell'agricoltura. Speriamo che il Consorzio per la bonifica della Campagna Vicana (Caserta), il primo consorzio di bonifica del Mezzogiorno, faccia presto sparire questo brutto paludoso di S. Sossio.

*Image:* marsh

*Text:* The shameful stain in the south of Italy must give way and disappear before the progress of agriculture. Hopefully the Consortium for the Reclamation of the Campagna Vicana (Caserta), the first consortium of reclamation in the South, will soon cleanse this swampy woods of S. Sossius.
